

Afrigrow BeefSA

Afrigrow Agriholdings has built Afrigrow BeefSA Quality Indicator that will ensure that our markets locally and in export markets are committed in delivering services like no other. We shall monitor our quality from farmgate to all our processing hubs including Fattening Centres, which are incubation facilities that assist farmers to standardise quality. Once our weqners reach the required weight, further finishing wil' be done in our Feedlots, Abattoirs and Deboning Hubs.

This is a daunting process that ensures that a traceability system is adopted to support our thousands of smallholder and commercial black beef producers. South Africa's plans to increase its export market uptake, hinges on a large scale process of streamlining BEEFSA growers, 10,000 of whom shall be integrated into Afrigrow value chain. This process is currently underway with SAMIC's technical teams
